Storwize Named 'Emerging Tech Dynamo' By CRN Magazine – Again!

Company selected for second straight year by publication for 'far superior technology, more robust margins, uncompromising technical support'

San Jose, Calif., June 12, 2007 – Storwize Inc., the only provider of innovative online storage compression solutions, today announced that it has been named by CRN to the Emerging Tech Dynamos database of IT vendors that are “handily beating established vendors in head-to-head product, margin, technical support and field engagement comparisons” in the publication’s June 4 issue. This marks the second year in a row that Storwize has been so honored by CRN.

Storwize was among the 163 channel-friendly vendors selected for inclusion into this year’s Emerging Tech Database, chosen for reshaping the information technology industry with their “far superior technology, more robust margins and uncompromising technical support,” said the article authored by Craig Zarley and Steven Burke.

“Once again we are honored to be included in CRN’s Emerging Vendors Directory as a provider of online compression appliances that resellers continue to find an appealing solution for implementation in organizations looking to reduce the amount of data under management,” said Jon Ash, VP Sales North America at Storwize. “Of the 29 storage companies so honored by CRN, we continue to be the only vendor providing the marketplace with a true data compression solution. With the Storwize STN-6000 enabling companies to get the upper hand on the increasing deluge of information they produce each year, those solution providers who include it in their product portfolios should find it to be an easy sale to qualified customers thereby enabling them to maximize their profit potential.”

Storwize's STN-6000 features new data compression technology that leverages a powerful multi-core hardware platform. This technology allows existing infrastructures to store as much as five times more data than is available on average today with no performance degradation, helping the most data-intensive enterprises maximize their growing network infrastructure at a fraction of their current cost. This new product requires no workflow changes, no software agents, no drivers and no configuration changes.

About Storwize

Storwize, Inc. is the only provider of online data compression solutions that dramatically boost storage space on network storage environments. Storwize appliances are installed between the organization's storage arrays and their network. Designed to work with any storage array it is connected to, the Storwize appliance typically provides organizations with 2-5X additional capacity with associated savings in capital, operational, maintenance and management resources. The company recently received funding from Sequoia Capital, one of the largest and most influential venture capital firms. Storwize solutions have been shipped to customer sites worldwide and successfully tested for interoperability with leading storage vendors such as EMC and NetApp. Privately held and headquartered in San Jose, Calif, Storwize is a member of the Storage Networking Industry Association (SNIA) and has gained an ISO 9001:2000 certification.
